RE: Omega Chemical Superfund Site
12504 – 12512 E. Whittier Blvd., Whittier, California
De Minimis General Notice Letter

Dear Mr. Binnard:

The purpose of this letter is to provide you with notice of your potential liability under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), as amended, at the Omega Chemical Superfund Site (the “Site”).

The Omega Chemical Superfund Site

The Site is a former refrigerant/solvent recycling operation in Whittier, California. During a Site Assessment in 1995, EPA observed in excess of 3,000 drums at the Site in various stages of deterioration. Data gathered at the Site in 1988 and 1995 also indicated the presence of hazardous substances, including, but not limited to, methylene chloride, tetrachloroethylene, trichloroethylene, and Freon 11 and 113, in the subsurface soils and groundwater. On May 3, 1995, EPA issued an Action Memorandum authorizing actions necessary to abate imminent and substantial endangerments at the Site, including securing the Site, conducting sampling, removing grossly contaminated equipment, structures, and debris, removing containerized wastes and disposing, stabilizing or treating grossly contaminated soils.

On May 9, 1995 and August 31, 1995, EPA issued Unilateral Administrative Orders (“UAOs”) to approximately 170 major generator potentially responsible parties (PRPs), all of whom had sent greater than 10 tons of hazardous materials to the Site, directing those PRPs to perform removal activities at the Site. Thereafter, these major generator PRPs formed a workgroup called the Omega Chemical Site PRP Organized Group (known as “OPOG”) and completed the removal activities that EPA required. In September 1998, EPA proposed the Site for listing on the National Priorities List (“NPL”). It was placed on the NPL on January 19, 1999.

Currently, the approximately 110 members within OPOG are performing work under a Partial Consent Decree which was entered by the United States District Court on February 28, 2001. Under this Partial Consent Decree, the Settling Defendants agreed to pay a portion of past costs and to perform the following work at the Site:

- 1) implementation of a Remedial Investigation / Feasibility Study ("RI/FS") for contamination in the vadose zone within the Phase 1A area of the Site;
- 2) performance of an Engineering Evaluation and Cost Analysis ("EE/CA") addressing groundwater contamination in the Phase 1A area;
- 3) implementation of the response action selected in EPA's Action Memorandum at the conclusion of the EE/CA;
- 4) performance of a risk assessment within the Phase 1A area; and
- 5) installation of as many as three groundwater monitoring wells at locations downgradient of the Phase 1A area and upgradient of the City of Santa Fe Springs water supply well.

In addition, EPA has been conducting a Fund-lead groundwater RI downgradient of the Phase 1A area. In the future, EPA anticipates combining the Fund-lead groundwater RI and the PRP-lead groundwater EE/CA into one FS. At the conclusion of the FS, EPA expects to propose and select a Site-wide remedy.

In August 2002, EPA issued letters noticing parties of their potential liability, also called "General Notice Letters," to approximately 100 additional major generator PRPs, all of whom sent 10 tons or more of hazardous materials to the Site. EPA has encouraged these PRPs to talk with OPOG about joining the established workgroup.

In October 2003, EPA issued General Notice Letters to approximately 300 de minimis generator PRPs, all of whom sent between 3 and 9.99 tons of hazardous materials to the Site. In February 2004, EPA issued settlement offers to these parties. In August 2004, EPA issued revised settlement offers to these parties. The de minimis settlement for the Site, Administrative Order on Consent No. 2004-13, was finalized in December 2005.

Potentially Responsible Parties

Those parties who may be responsible for the waste at Superfund sites are referred to as "potentially responsible parties" or "PRPs". PRPs include individuals, businesses, governmental agencies, and other types of organizations. You may be a PRP if you are:

- 1) a current owner or operator of the Site;
- 2) the former owner or operator of the Site during the period of waste disposal;
- 3) a party that arranged for the treatment, disposal, or transportation of hazardous substances to the Site (a "generator"); or
- 4) a party that selected the Site as a place to dispose of hazardous substances and who transported these substances to the Site (referred to as "transporters").

The parties receiving this letter or similar letters are all believed to be generators of wastes disposed at the Site, and therefore PRPs at the Site.

De Minimis Parties

EPA has designated as de minimis waste generators those parties who contributed between 3 and 9.99 tons of waste to the Site. These parties are termed de minimis parties because the amounts of waste each of these parties contributed to the Site is small compared to

the amounts of waste contributed by each of the approximately 210 major waste generators. Each party receiving this letter is a de minimis party at the Site.

EPA has reviewed the State of California's manifest information and determined that you contributed 7.7979 tons of waste to the Site. On the basis of this determination, EPA is notifying you that you are a PRP at the Omega Chemical Site and that you are classified as a de minimis generator. Although you were not identified during earlier reviews of the generator manifests for Omega, your potential liability at the Site is equivalent to other de minimis parties noticed in 2003. Please be aware you may be liable for past and future costs incurred to clean up the Site. A complete list of recipients of similar de minimis General Notice letters is enclosed. A summary of the manifests attributed to you, and copies of those manifests, are also enclosed as Attachment A.

If, after you have reviewed the enclosed information, you believe that the volume of wastes attributed to you is incorrect, please notify EPA in writing as soon as possible, but no later than thirty (30) calendar days after your receipt of this letter. In any such notification you send to EPA, please be sure to clearly state the basis for your claim that EPA's information is incorrect and provide accurate and legible copies of all documents necessary to substantiate your claim. Send your letter and documentation to the following address:

Linda Ketellapper
U.S. Environmental Protection Agency
Superfund Division
75 Hawthorne Street, SFD-7-B
San Francisco, CA 94105

Under CERCLA Section 107(a)(3), any person who arranged for the disposal of hazardous substances at a facility from which there is a release, or threatened release of a hazardous substance, shall be liable for costs incurred by EPA to respond to such releases. 42 U.S.C.A. § 9607(a)(3). Furthermore, EPA may unilaterally issue such orders as may be necessary to protect public health and welfare and the environment under CERCLA Section 106(a), including, but not limited to, orders to perform response actions at the Site. 42 U.S.C.A. § 9606(a). EPA is not issuing you an order at this time, but giving you notice of your potential liability at this Site.

On December 14, 2005, the de minimis Settlement was finalized. In that agreement, settling parties agreed to pay EPA a settlement amount based upon their contribution of waste to the Site in exchange for a release of liability at the Site. Unfortunately, your potential liability was not discovered until after the final deadline for settling with EPA under this settlement had passed. As a result, EPA cannot offer you a de minimis settlement at this time. However, it is EPA's understanding based on recent telephone conversations between Linda Ketellapper, you and your accountant, Richard Pejsa, that Para Plate – Arizona, Inc. is experiencing financial hardship and you anticipate that your company will qualify for a reduced settlement. Therefore, EPA suggests you immediately apply for an ability to pay settlement which is discussed in the next paragraph. If after reviewing your financial information, EPA determines that you do not qualify for a reduced settlement, EPA will then settle with you in a future de minimis Settlement.

As an example of a settlement amount paid by parties in a similar position as your company or organization, de minimis settling parties paid \$12,632/ton of waste sent to the Site for a full release of liability or \$9,678/ton for a limited release of liability. If after a review of your company's financial status EPA determines that you do not have the ability to pay the

amount which would be necessary to resolve your potential liability at the Site, EPA will extend a settlement offer to your company for an amount which it could pay without experiencing undue hardship. An ability to pay settlement would release your company from all liability at the Site. If your company or organization wishes to request a financial review, please submit an ability to pay application no later than July 31, 2006. EPA will provide you with this application under separate cover.

Also enclosed for your use is an information sheet intended to inform small businesses of their rights, under the Small Business Regulatory Enforcement Fairness Act (SBREFA), to comment to an Ombudsman about EPA enforcement activity. This information sheet also provides information on compliance assistance available to small businesses. We have included this information sheet without making a determination whether your business is a small business as defined by Section 222 of SBREFA or related provisions.

If you have general questions regarding the Site, you may contact Linda Ketellapper, the EPA Case Developer, at 415-972-3104. If you have any technical questions regarding the Site, you may contact Chris Lichens, the EPA Remedial Project Manager, at 415-972-3149. If you have any legal questions, you may contact Jim Collins, the EPA Assistant Regional Counsel, at 415-972-3894.

Sincerely,

Elizabeth Adams, Chief
Site Cleanup Branch

INFORMATION SHEET

[U.S. EPA Small Business Resources](#)

If you own a small business, the United States Environmental Protection Agency (EPA) offers a variety of compliance assistance and tools to assist you in complying with federal and State environmental laws. These resources can help you understand your environmental obligations, improve compliance and find cost-effective ways to comply through the use of pollution prevention and other innovative technologies.

EPA Websites

EPA has several Internet sites that provide useful compliance assistance information and materials for small businesses. Many public libraries provide access to the Internet at minimal or no cost.

EPA's Small Business Home Page (<http://www.epa.gov/sbo>) is a good place to start because it links with many other related websites. Other useful websites include:

EPA's Home Page
<http://www.epa.gov>

Small Business Assistance Programs
<http://www.epa.gov/ttn/sbap>

Compliance Assistance Home Page
<http://www.epa.gov/oeca/oc>

Office of Site Remediation Enforcement
<http://www.epa.gov/oeca/osre>

Hotlines, Helplines and Clearinghouses

EPA sponsors approximately 89 free hotlines and clearinghouses that provide convenient assistance on environmental requirements.

EPA's Small Business Ombudsman Hotline can provide a list of all the hot lines and assist in determining the hotline best meeting your needs. Key hotlines include:

**EPA's Small Business Ombudsman
(800) 368-5888 .**

Hazardous Waste/Underground Tanks/
Superfund
(800) 424-9346

National Response Center
(to report oil and hazardous substance spills)
(800) 424-8802

Toxics Substances and Asbestos Information (202) 554-1404

**Safe Drinking Water
(800) 426-4791**

**Stratospheric Ozone and Refrigerants
Information
(800) 296-1996**

Clean Air Technical Center
(919) 541-0800

**Wetlands Hotline
(800) 832-7828**

Continued on back

Compliance Assistance Centers

In partnership with industry, universities, and other federal and state agencies, EPA has established national Compliance Assistance Centers that provide Internet and "faxback" assistance services for several industries with many small businesses. The following Compliance Assistance Centers can be accessed by calling the phone numbers below and at their respective websites:

Metal Finishing

(1-800-AT-NMFRC or www.nmfrc.org)

Printing

(1-888-USPNEAC or www.pneac.org)

Automotive Service and Repair

(1-888-GRN-LINK or www.ccar-greenlink.org)

Agriculture

(1-888-663-2155 or www.epa.gov/oeca/ag)

Printed Wiring Board Manufacturing

(1-734-995-4911 or www.pwbrc.org)

The Chemical Industry

(1-800-672-6048 or www.chemalliance.org)

The Transportation Industry

(1-888-459-0656 or www.transource.org)

The Paints and Coatings Center

(1-800-286-6372 or www.paintcenter.org)

State Agencies

Many state agencies have established compliance assistance programs that provide on-site and other types of assistance. Contact your local state environmental agency for more information. For assistance in reaching state agencies, call EPA's Small Business Ombudsman at (800)-368-5888 or visit the Small Business Environmental Homepage at <http://www.smallbizenviroweb.org/state.html>.

Compliance Incentives

EPA provides incentives for environmental compliance. By participating in compliance assistance programs or voluntarily disclosing and promptly correcting violations, businesses may be eligible for penalty waivers or reductions. EPA has two policies that potentially apply to small businesses: The Audit Policy (<http://www.epa.gov/oeca/auditpol.html>) and the Small Business Policy (<http://www.epa.gov/oeca/sbp.html>).

[smbusih.html](http://www.epa.gov/oeca/sbp.html#smbusih.html)). These do not apply if an enforcement action has already been initiated.

Commenting on Federal Enforcement Actions and Compliance Activities

The Small Business Regulatory Enforcement Fairness Act (SBREFA) established an ombudsman ("SBREFA Ombudsman") and 10 Regional Fairness Boards to receive comments from small businesses about federal agency enforcement actions. The SBREFA Ombudsman will annually rate each agency's responsiveness to small businesses. If you believe that you fall within the Small Business Administration's definition of a small business (based on your Standard Industrial Code (SIC) designation, number of employees or annual receipts, defined at 13 C.F.R. 121.201; in most cases, this means a business with 500 or fewer employees), and wish to comment on federal enforcement and compliance activities, call the SBREFA Ombudsman's toll-free number at 1-888-REG-FAIR (1-888-734-3247).

Your Duty to Comply

If you receive compliance assistance or submit comments to the SBREFA Ombudsman or Regional Fairness Boards, you still have the duty to comply with the law, including providing timely responses to EPA information requests, administrative or civil complaints, other enforcement actions or communications. The assistance information and comment processes do not give you any new rights or defenses in any enforcement action. These processes also do not affect EPA's obligation to protect public health or the environment under any of the environmental statutes it enforces, including the right to take emergency remedial or emergency response actions when appropriate. Those decisions will be based on the facts in each situation. The SBREFA Ombudsman and Fairness Boards do not participate in resolving EPA's enforcement actions. Also, remember that to preserve your rights, you need to comply with all rules governing the enforcement process.

EPA is disseminating this information to you without making a determination that your business or organization is a small business as defined by Section 222 of the Small Business Regulatory Enforcement Fairness Act (SBREFA) or related provisions.

Omega Chemical Superfund Site

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY • REGION 9 • SEPTEMBER 2003

OMEGA CHEMICAL SUPERFUND SITE UPDATE

The United States Environmental Protection Agency (EPA) and a group of potentially responsible parties (PRPs) have been conducting an investigation of the groundwater and soil contamination at the Omega Chemical Superfund site in Whittier, CA (see Figure 1, page 2). This fact sheet discusses what has been completed to date on the site investigation.

EPA is studying the nature and extent of the groundwater contamination near the site. EPA is also overseeing the PRPs as they investigate the extent and nature of soil and groundwater contamination on the Omega property. As a result of past activities at the site, soil and groundwater are contaminated with various volatile organic compounds (VOCs). VOCs are organic compounds that easily evaporate at room temperature. The most prevalent VOCs at the Omega site are perchloroethylene (PCE), trichloroethylene (TCE), Freon 11 and Freon 113. These solvents were previously used as degreasers, dry-cleaning chemicals and refrigerant agents. The nearest drinking water well to the site is approximately 1.3 miles downgradient from the site (Figure 1) in Santa Fe Springs, CA. All drinking water served by the City of Santa Fe Springs and the City of Whittier, including water from this well, meets State and Federal drinking water standards. The maximum contamination level (MCL) allowed in drinking water for PCE and TCE is five parts per billion (ppb), for Freon 11 its 150 ppb and Freon 113 its 1200 ppb. A MCL is the maximum permissible level of a contaminant in water delivered to a public drinking system.

As part of the site investigation, EPA is developing a monitoring program to track the movement of contaminated groundwater from the site. The program will help EPA monitor the flow of the contamination under ground so it does not threaten drinking water sources, and will determine if other sources are contributing to the contamination. Information from the monitoring program is used to determine what type of groundwater cleanup system will be needed.

WHAT HAS HAPPENED, SO FAR?

Site History

The Omega Chemical Superfund site is located at 12504 and 12512 East Whittier Blvd., in the City of Whittier, Los Angeles County, California. The site is approximately

40,000 square feet in area. There are two buildings, a warehouse and an office building. The rest of the site is a paved service yard. From 1976 to 1991, the Omega Chemical Corporation and Refrigerant Reclamation Company operated a used solvent and refrigerant recycling and reformulation treatment facility. The facility primarily handled chemicals used in refrigerator and freezer coils and chlorinated solvents that included degreasing chemicals and dry-cleaning chemicals.

In the late 1980s, the Los Angeles County Department of Health Services, Public Works Department and the Fire Department investigated the Omega facility. Contamination was found in shallow soil at depths less than 3.5 feet below ground surface and at concentrations up to 1,000 ppm. This site was referred to the EPA's Emergency Response Section in 1995. Also in 1995, the EPA issued a Unilateral Administrative Order to over 170 PRPs to remove contaminants that posed an immediate or substantial threat to public health and environment. This included the removal of more than 2,700 drums from the site. In 2001, a settlement known as a partial Consent Decree was signed with over 100 PRPs to conduct a soil remedial investigation and feasibility study (RI/FS) at the Omega property; install three (3) downgradient monitoring wells to be sampled quarterly; and to design and implement a groundwater containment and mass removal system near the Omega facility. A RI/FS allows EPA to study the nature and extent of the contamination at a site, and helps to decide what are the best and most cost effective cleanup methods that can be considered. Work required under this partial Consent Decree is ongoing.

EPA Activities:

From August to November 2001, EPA drilled eighty borings and took a water sample at each location. The data results helped EPA to understand the extent of groundwater contamination better and helped to determine where

Cont'd. on page 2

Figure 1: Omega Chemical Superfund site, showing outer boundaries of contaminants

additional monitoring wells needed to be placed. A monitoring well is used to collect periodic groundwater samples. The map (above) shows an outline of the site's groundwater contamination area, referred to as a plume. The plume's border shows where we did not detect VOCs above 5ppb. Based on the boring sampling data, EPA installed eighteen groundwater monitoring wells in December 2001. The monitoring wells are currently sampled quarterly and results are typically available within a four-month period. In August 2001, EPA conducted a second phase of exploratory sampling to more fully evaluate the extent of the contaminated groundwater. An additional thirty-five locations were sampled.

PRP Activities:

Four rounds of quarterly sampling have been conducted on the first seven of the ten PRP monitoring wells installed. The two most recently installed wells were sampled for the

first time in late March 2002 and are now sampled semi-annually along with other PRP wells. The PRPs conducted pump tests of the four nearest downgradient wells in March 2003. The PRPs have also prepared a draft workplan for Remedial Investigation (RI) of soils on the Omega site. The workplan explains how they will go about conducting the study.

Based on data collected at all of the groundwater wells, EPA has identified the general location of the groundwater contamination downgradient from the Omega Chemical facility. These data will be used in the future for the site-wide remedial investigation and feasibility study in order that the EPA may select a final cleanup remedy (or plan) for the site.

TECHNICAL ASSISTANCE PROGRAM

A Technical Assistance Grant (TAG) is available for citizens who live near a Superfund site. The grant helps qualified citizen groups affected by a Superfund site to hire an independent technical advisor to help interpret and comment on site-related information. An initial grant of up to \$50,000 is available. For further information about the grant, please call us and request an application (toll-free 800-231-3075) or get it from the TAG web page: www.epa.gov

SITE INFORMATION REPOSITORY

The EPA maintains site information repositories at the Whittier Public Library and at the EPA Superfund Records Center. These repositories contain project documents, fact sheets, and reference materials. The EPA encourages you to review these documents to gain a complete understanding of the site. The information repository's locations are listed below. EPA also has a site information web page at <http://Yosemite.epa.gov/r9/sfund/overview.nsf>, scroll to the Omega Chemical site.

PROGRAMA DE ASISTENCIA TÉCNICA

Un Programa de Asistencia Técnica (TAG, por sus siglas en inglés) está disponible para ciudadanos que viven cerca del Sitio Superfondo. El programa ayuda a grupos de ciudadanos afectados por un Sitio de Superfondo para que contraten los servicios de un consejero técnico independiente para que les ayude a interpretar y comentar sobre información relacionada con el sitio. Un programa financiero inicial de hasta \$50,000 está disponible. Para más información sobre este programa, por favor llamenos y pida una solicitud (numero gratis 800-231-3075) ó la puede obtener del sitio de internet TAG: www.epa.gov.

DEPOSITO DE INFORMACIÓN DEL SITIO

La EPA mantiene depósitos de información sobre el sitio en la Biblioteca Pública de Whittier y en el Centro de Registro de Superfondo de la EPA. Estos depósitos contienen documentos sobre el proyecto, boletines, y materiales de referencia. La EPA le aconseja que revise estos documentos para que obtenga un mayor conocimiento del sitio. La EPA también cuenta con una pagina de internet con información del sitio en la siguiente dirección: <http://Yosemite.epa.gov/r9/sfund/overview.nsf>, desplazarse hacia abajo al Sitio Omega Chemical.

El Sitio Superfondo Omega Chemical

LA AGENCIA PARA LA PROTECCIÓN DEL MEDIO AMBIENTE DE LOS ESTADOS UNIDOS • REGION 9 • SEPTIEMBRE DE 2003

PROGRESO EN EL SITIO SUPERFONDO OMEGA CHEMICAL

La Agencia De Protección Ambiental De Los Estados Unidos (EPA por sus siglas en inglés) junto con las compañías potencialmente responsables (PRPs por sus siglas en inglés) han estado conduciendo una investigación sobre la contaminación del agua subterránea y el suelo en el Sitio Superfondo Omega Chemicals en Whittier, CA (vease Figura 1). Este boletín trata de lo que se ha logrado hasta la fecha con respecto a la investigación en el sitio.

La EPA está estudiando la naturaleza y el alcance de contaminación del agua subterránea cerca del sitio. La EPA también está supervisando a las compañías potencialmente responsables durante la investigación sobre naturaleza y el alcance de contaminación en la propiedad de Omega. Como resultado de actividades llevadas acabo en el pasado dentro del Sitio, el suelo y el agua subterránea están contaminados con varios compuestos orgánicos volátiles (VOCs, por sus siglas en inglés). Los compuestos orgánicos volátiles se caracterizan por evaporarse fácilmente en temperaturas normales. Los compuestos orgánicos más comunes en el sitio Omega son percloroeteno (perchloroethylene-PCE), tricloroeteno (trichloroethylene-TCE), freón (Freon) 11, y freón (Freon) 113. Estos solventes eran utilizados para disminuir la grasa, como químicos para limpiar en seco y también como agentes refrigerantes. El pozo de agua potable más cercano al lugar está ubicado aproximadamente a 1.3 millas cuesta abajo del sitio (Figura 1) en Santa Fe Springs, CA. El nivel máximo de contaminación (MCL, por sus siglas en inglés) de PCE y TCE permitido en el agua potable es de cinco partes por billón (ppb por sus siglas en inglés), de Freon 11 es de 150 ppb y de Freon 113 es 1200 ppb. Un MCL es el nivel máximo de contaminación permitido en el agua destinada a un sistema público de agua potable. El agua potable para la Ciudad de Santa Fe Springs y la Ciudad de Whittier cumple con las normas estatales y federales con respecto al agua potable.

Como parte de la investigación, la EPA está desarrollando un programa de monitoreo para rastrear el movimiento del flujo de agua contaminada del sitio. Este programa ayudará a la EPA a monitorear el flujo de contaminación subterránea para no poner en riesgo las fuentes de agua potable, y así ayudar a determinar si algunas otras fuentes están contribuyendo a la contaminación. El programa ayuda a determinar que tipo de sistema de limpieza se necesitará para el agua subterránea.

¿QUE HA SUCEDIDO, HASTA AHORA?

Historia del Sitio

El sitio superfundo Omega Chemical está localizado en el 12504 y 12512 East Whittier Blvd., en la Ciudad de Whittier, Condado de Los Angeles, California. La área del sitio es de aproximadamente 40,000 pies cuadrados. Hay dos edificios, una bodega y sus oficinas. El resto del sitio consiste en un patio de servicio pavimentado. De 1976 a 1991, Omega Chemical Corporation y Refrigerant Reclamation Company operaron una instalación de reciclaje, tratamiento y reformulación de solventes usados. La instalación manejaba principalmente químicos usados en las bobinas de los refrigeradores y congeladores, así como solventes clorinados que incluían químicos para disminuir la grasa al igual que químicos utilizados para la limpieza en seco.

A finales de la década de los 80s, el Departamento de Servicios de Salud del Condado de Los Angeles, el Departamento de Obras Públicas, y el Departamento de Bomberos investigaron la instalación Omega. Se encontró que a una profundidad menos de 3.5 pies debajo de la superficie, el suelo contenía contaminaciones en concentraciones de hasta 1,000 partes por million (ppm por sus siglas en inglés). En 1995, la EPA emitió una Orden Unilateral Administrativa a mas de 170 compañías potencialmente responsables para que removieran los contaminantes que ponían en riesgo la salud pública y ambiental. Esto incluyó remover mas de 2,700 barriles del sitio. En el 2001 se firmó un Decreto de Consentimiento con mas de 100 compañías potencialmente responsable para conducir una investigación de remediación y un estudio de viabilidad en la propiedad de Omega; instalar 3 pozos de monitoreo cuesta abajo de los cuales se tomarían muestras trimestralmente; y diseñar e implementar un sistema de contención para el agua subterránea cuesta abajo y un sistema masivo de removimiento que estaría localizado cerca a las instalaciones de Omega.

Actividades de la EPA

De Agosto a Noviembre del 2001, la EPA excavó 80 pozos y tomó muestras de agua de cada locación. Los resultados de la información obtenida ayudaron a la EPA a entender la extensión de contaminación del agua subterránea mejor y ayudo a determinar donde serían puestos los pozos de monitoreo. Un pozo de monitoreo es utilizado para recolectar muestras de agua subterránea periodicamente. El mapa (a la derecha) muestra el contorno del flujo de la contaminación en el agua subterránea del sitio (el flujo o plume en inglés se refiere a la forma que toma una substancia al infiltrarse o repartirse en un terreno). El contorno

del flujo indica hasta donde no se detectaron compuestos orgánicos volátiles por arriba de los 5 ppb. Basándose en la información proveniente de las muestras tomadas de los pozos, la EPA instaló 18 pozos de monitoreo en Diciembre del 2001. Actualmente se toman muestras de los pozos de monitoreo cada cuatro meses, y los resultados están disponibles en un periodo de cuatro meses. En agosto del 2001 la EPA condujo una segunda fase de muestras de exploración para mejor evaluar el alcance de contaminación en el agua subterránea. Se tomaron muestras de treinta cinco locaciones adicionales.

Actividades de las compañías potencialmente responsables (PRPs por sus siglas en inglés)

Cuatro rondas de muestras han sido conducidas cada cuatro meses en los primeros siete de los 10 pozos de monitoreo instalados por las compañías potencialmente

Figura 1: Sitio Superfondo Omega Chemical, mostrando los contornos de alvera de los contaminantes

responsables. Los dos pozos que fueron instalados recientemente, fueron analizados por primera vez a finales de Marzo del 2002. Las compañías potencialmente responsables condujeron pruebas de bombeo en los cuatro pozos más cercanos cuesta abajo en Marzo del 2003. Las compañías potencialmente responsables también prepararon un borrador del Plan de Trabajo para la Investigación Remediadora (RI por sus siglas en inglés) del suelo en el Sitio Omega. El plan de Trabajo explica como conducirán el estudio. Basándose en la información colectada en todos los pozos de agua subterránea, la EPA ha identificado una locación general de agua subterránea contaminada cuesta abajo de las instalaciones de Omega Chemical. Esta información será utilizada en el futuro para la Investigación Remediadora y Estudio de Viabilidad en todo el sitio para que la EPA pueda seleccionar una limpieza final para el sitio.
